2022 Ford F350 Super Duty Supershorty Custom Rear Triangulated 4 Link

Supershorty Ford trucks are special ordered from Ford with all available options that can be selected for the regular cab models. The highest quality lift kits and components are used to lift the front end. The truck frame is resized by removing the extra length from the rear end of the frame to accept the factory 6.5' bed making it the same wheelbase as the Regular Cab SWB F150. This has been done so that we can utilize the 7.3L Godzilla with the 10R140 10 speed automatic transmission and a DANA 60 Front Differential and the massive M300 Rear Differential. This allows us to use these trucks and all of the potential that can be realized with this powertrain in extreme motorsports such as rock crawling, desert/sand dune adventures, and overlanding with more gear than half ton trucks can carry while maintaining the maximum maneuverability and capability of a short

wheelbase truck. The last trucks that Ford produced with this axle configuration and similar wheelbase was 1979, our new Supershortys have over three times the horsepower and exponentially more torque and axle strength that their predecessors of 44 years ago. Have fun with them as they are or add a supercharger.
